## Workshops

on different materials & building methods

Adobe | amàco (FR)  
Earth | Fibre | Surface | Francois Streiff (FR) Becky Little (GB)  
Rammed Earth | Dominik Abbrederis (AT) + partner  
Bamboo | NN

Every workshop takes place twice within the two weeks. Participants can choose one workshop for the first and one for the second week. Each one lasts 4,5 days. During the workshop, different elements will be built on site.

After the application we will ask you for your favourite choice, which we hope to be able to fulfill. There is time planned for an exchange between the different workshops.

## Material Science

The summer school starts with a whole day on material science.

The experienced team of *amàco* will give basic information on earth. The lecture includes also practical experiments.

A bamboo expert will present bamboo as a building material, the basics of the plant, how to design with bamboo and give examples of contemporary buildings.

## Peer Lectures

In the evenings participants can present their projects and discuss them with the the group. A great chance for networking. If you are interested in giving a lecture, feel free to contact us!

## Field Trip

A field trip takes you to the open air museum Stübing, where more than 80 historical buildings from all over Austria are exposed.

## Theory Classes

Sustainable architecture is challenging. Improve your skills and know-how in lectures, groupwork and discussions. Tutors and lecturers are going to share their passion. We have invited Anna Heringer, Martin Rauch and many others.

Several topics can be discussed with experts in small focus groups. Each participant can choose two subjects (not all the topics are defined yet).

## Closing Event & Party

The end of the program will be a closing session including the presentation of the workshop results, reflexion and collection of prospects.
